

The Lite Solar offers the latest technology, in a full-function asset tracking solution. Utilizing the latest in LTE-Cat M1 cellular technology, Lite cellular asset trackers draw very low power and therefore ensure a long battery life to track, monitor, and manage a wide variety of mobile and fixed assets in different environmental conditions. Lite asset trackers are small, rugged, solar-powered tracking devices. They are configured to report their data and GPS location via low-power wide-area networks such as LTE-M.

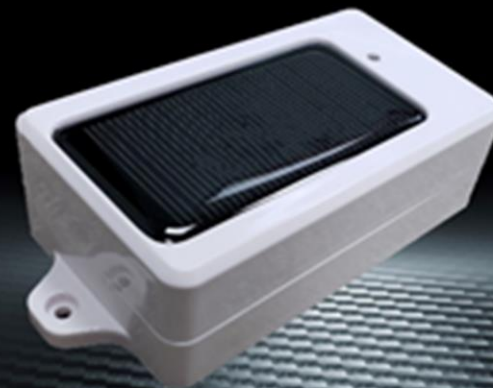

Lite's cellular asset trackers require network certification to function. Currently, Lite is certified in North America and available for purchase in the US, Mexico and Australia.

Lite devices are configured to report on a time interval or an event; therefore, depending on the frequency of data reporting required, can last up to 20 years if solar powered.

Key Features:

- The longest lasting asset tracker on the market
- Newest, LTE Cat M1 technology to keep you on the cutting edge
- Simple installation. Just attach to your asset and go!
- Automatically recharges itself with just a few hours of sunlight
- Extremely small footprint at under 5 inches.
- The most competitively-priced solar asset tracker you can find
- Great for trailers, heavy equipment, shipping containers, atvs, etc.
- Configurable to report more frequently than other asset trackers

GPS FMS LITE SOLAR

Dimensions:

- **3.96x2.23x1.33 (Length 4.89 with tabs)**

Weight:

- **5.6 oz**
- **IP/Ingress Rating:**
- **IP-66 Weather resistant**

Estimated Battery Life:

Up to 20 years (Based on sunlight exposure)
